Comments: Installation guide available at www.impexstone.com

- The oxidation of slate is a natural phenomenon and the Eclipse stone could be affected if in contact with humidity. In order to reduce the effects, a sealer may delay or lessen this phenomenon. Impex Stone can not at any time be held responsible for this natural process.
- Before installing, please verify the color nuances and lot numbers.
- If installed outdoor, the use of a sealer will prevent the stone oxidation.
- Sealer : if used, it is best to do a test on a piece to verify the final effect.
